EXPLANATORY NOTES

1. AGRICULTURE

1.1 This section presents information about land utilization, number and area of farms by size, area and production of agricultural crops, vegetables & fruits, local production of fertilizers by variety, import of fertilizers by variety, province-wise & crop-wise consumption of fertilizers, number of agriculture tractors imported & tractors locally manufactured, overall water availability, area irrigated by different sources, season-wise rivers inflow at rim stations, provinces-wise & command-wise canal withdrawals, escapages below Panjnad & Kotri barrages, output of major forest products, fish production, estimated livestock population and estimated production of livestock products.

1.2 The yearly trend of indices of acreage, quantum and value of important crops is prescribed in tables 1.2 (a), 1.2 (b) and 1.2 (c). These indices have been calculated using the following formulae:

$$\text{Acreage Index} = I_{an} = \frac{\sum A_n}{\sum A_o} \times 100$$

$$\text{Quantum Index} = I_{qn} = \frac{\sum q_n}{\sum q_o} \times 100$$

$$\text{Value Index} = I_{vn} = \frac{\sum p_n q_n}{\sum p_o q_o} \times 100$$

Where:

- p_n is current year price
- p_o is base year price
- q_n is current year quantity.
- q_o is base year quantity
- A_n is current year area
- A_o is base year area

1.3 Provincial Agriculture Departments prepare area and production estimates for all crops. Pakistan Bureau of Statistics collects these crop estimates, checks the validity, consolidates the same at the national level and then releases these estimates at the national level after obtaining the approval of competent authority.

1.4 Three estimates of six crops (wheat, cotton, rice, sugarcane, gram and potato) while two estimates of fourteen other major crops (onion, maize, bajra, jowar, sesamum, mung, mash, barley, R&M seeds, tobacco, matter, masoor and other kharif pulses & rabi pulses) are released. For rest of the crops only one estimate is released.

The area and production estimate of crops given in table 1.5 & 1.6 is based on the following methodology:

1.5 In the Punjab and Khyber Pakhtunkhwa provinces, three acreage estimates of six main crops are prepared. The first two acreage estimates are prepared by Crop Reporting Services (CRS), agriculture department. The final or third acreage estimates is based on the Complete count (Khasra Girdawari) undertaken by the Provincial Revenue Departments. For fourteen crops, in the above two provinces only two acreage estimates are prepared. The first is prepared by CRS and the final is based on complete count (Khasra Girdawari) undertaken by the Provincial Revenue Departments. In Sindh province all acreage estimates are based on Sample Survey Technique while in Balochistan province acreage estimates for all crops are prepared on the basis of information supplied by the officials of Agriculture Department based on Subjective Judgment Method.

1.6 The traditional method of estimating production of other than 14 crops given above consists of multiplying area sown with its estimated yield, which is determined through subjective judgement of the reporting staff. The yield is estimated keeping in view the normal yield fixed on the basis of crop cutting experiments undertaken by the Provincial Agriculture and Revenue Departments during specified period and condition of crop during its growth ascertained from the farmers or based on their own personal judgement.

2. BALANCE OF PAYMENTS

2.1 Gold and foreign exchange reserves of Pakistan: (Table 2.1). The statistics shown in the table are received from State Bank of Pakistan. This table shows total Million US\$ value of Gold and foreign exchange reserves.

2.2 Pakistan's Balance of Payments:(Table 2.2) The statistics shown in the table are collected from State Bank of Pakistan. The presentation of the data is based on IMF's Balance of Payments and International Investment Position Manual Sixth Edition (BPM6). The table comprises five major categories viz (1) Current Accounts (2) Capital Accounts (3) Financial Account (4) Errors and Omissions & (5) Exceptional Financing. Errors and Omissions is a balancing item intended to offset overstatement or understatement of recorded components due to statistical discrepancies.

3. CLIMATE

3.1 Temperature and rainfall data are collected from the Pakistan Meteorological Department. Table 3.1 and 3.2 provide monthly data on temperature and rainfall for selected stations respectively. Mean maximum and mean minimum temperatures are the arithmetic means of daily maximum and minimum temperatures recorded during the month.

3.2 Climatically, Pakistan enjoys a considerable measure of variety. North and northwestern high mountain ranges are extremely cold in winter while the summer months from April to September are very pleasant. The vast plains of the Indus Valley are extremely hot in summer and have cold weather in winter. The coastal strip in the south has a temperate climate. There is general deficiency in the rainfall. Rains are monsoonal in the origin and fall late in summer. Average rainfall is 762 millimetres per annum.

3.3 Table 3.3 and 3.4 provide monthly data of average (over a 30 year period 1981-2010) normal temperature and rainfall at selected centers respectively.

4. CO-OPERATIVES

Co-operative Societies:-

4.1 (Tables 4.1 & 4.2) with the establishment of Federal Bank for Co-operatives under the Act called Establishment of the Federal Bank for Co-operatives and Regulation of Co-operative Banking 1976, a uniform system of Co-operatives has come into force throughout Pakistan. In this system the Federal Bank for Co-operatives is at the top, the provincial Co-operative Banks at the middle and the Primary Co-operative Societies at the base. Briefly, these categories are defined below:-

i) Primary Co-operative Societies:-

12. LABOUR

12.1 Labour Force Sample Survey forms a regular feature of Pakistan Bureau of Statistics and is conducted on quarterly basis in selected sample areas covering both rural and urban population of Pakistan. The first series of survey was conducted during July, 1963 to June, 1964. Next survey was conducted during 1974-75 and 1978-79. In 1982-83 the survey was conducted on a limited scale, concentrating on current employment and unemployment levels. The latest survey was conducted in 2018-19. Its report is not approved yet by the Ministry of Planning Development and Special Initiatives. LFS 2020-21 is being conducted at district level in the light of decision taken by Governing Council. 13. MANUFACTURING

13.1 Table No.13.1 contains series of quantum Index Numbers of Large-Scale Manufacturing Industries (QIM) for Pakistan, The index series from 2005-06, cover 112 items contributing 70.3% of value added with base year 2005-2006.

13.2 A brief description about the scope, sources of data, weighting system, formula used for computation of the index series is given below: -

- a) **Scope:** The index is designed to measure changes in physical output for the Large Scale Manufacturing Industries.
- b) **Sources of Data:** The production data used for the computation of indices are received from Ministry of Industries, Provincial Bureaus of Statistics and Oil Companies Advisory Committee (OCAC).
- c) **Weights:** The weights have been derived on the basis of 2005-06 CMI value added at factor cost (gross value of production less industrial cost less indirect taxes plus subsidies). In deriving the weights the total value added for Pakistan has been taken to be 100 and the weights at industry level have been taken as percentage of this total whereas weights at items level have been derived on the basis of their relative value of production in the industry to which these items belong. However, in case where only one item has been selected the whole weight of that industry has been assigned to that selected item only.
- d) **Formula used:** Laspeyre's formula has been used for the computation of index numbers which is given below: -

$$I_n = \frac{\sum q_n p_o}{\sum q_o p_o} \times 100 = \frac{\sum \frac{q_n}{q_o} p_o q_o}{\sum q_o p_o} \times 100 = \frac{\sum \frac{q_n}{q_o} w}{\sum w} \times 100$$

Where I_n = quantum index number for current period, q_o and p_o represent the quantity and prices respectively of the items in the base period, q_n is the quantity in the current period, W is the weight of an item and $\sum W=100$.

13.3 Table 13.2 contains production data of selected manufacturing items. Production data are collected through voluntary co-operation of various Government and non-government agencies. Since the data collected through non-government agencies takes considerable time for reconciliation of the data therefore, up-to date figures in respect of many items cannot be published in time. However, PBS is trying its level best to reduce the time-lag in publishing of data by taking different measures. Sometimes, the data

Contd.

received from source agencies are revised without the knowledge of PBS. Moreover, there is a possibility in some cases, the data published by PBS may vary from those published by original sources.

13.4 Table Nos. 13.3 to 13.6 cover the data regarding Census of Manufacturing Industries. CMI is conducted under the Industrial Statistics Act, 1942 and covers those establishments which are engaged in manufacturing activities whether for whole or part of the year with single or joint ownership or control and registered under Factories Act, 1934. Factories which are liable for registration have also been covered. If, however, an establishment is engaged in more than one activity and separate accounts are maintained by the establishment for each activity, then separate returns are collected for each such activity. The defence and government workshops though engaged in manufacturing activities and registered under Factories Act are, however, excluded.

13.5 The last CMI was conducted in 2005-06 and covered the variables such as (i) Number of Reporting Establishments (ii) Value of Production (iii) Industrial Cost (iv) Census Value Addition (v) Value of Fixed Assets (vi) Average Daily Person Engaged.
